

**40RM/RMS
Packaged Air-Handling Units
50/60 Hz
6 to 30 Nominal Tons (21 to 105 kW)**

turn to the experts™

Product Data

40RM007S-012S
40RMS008S-012S

40RM014S-034S
40RMS014S-034S

Features / Benefits

- Multiposition design can be installed horizontally or vertically without modification
- Standard double skin units for a better indoor air quality (IAQ)
- Polyester powder painted zinc coated steel panels provide additional protection against rusting & discoloration in areas with high UV factor
- High-static design meets a wider range of applications than competitive packaged air handler lines
- Economizer accessory provides ventilation air and "free" cooling
- Cooling coils with mechanically-bonded fins provide peak heat transfer
- Standard factory-installed thermostatic expansion valves (TXVs) on 40RM units
- Standard sloped drain pans
- 1" WASHABLE filters having frontal access to remove them
- Easy installation and maintenance; removal of one side panel allows access to serviceable components; external piping connections

The 40RM Series is your best choice for packaged air handlers. Model 40RM units have direct-expansion coils and model 40RMS units have chilled water coils. All models offer excellent fan performance, a unique combination of indoor air quality features, easy installation, and affordable prices. Their versatility and state-of-the-art features will provide economical performance now and in the future.

Indoor air quality features:

The unique combination of features in the 40RM Series air handlers ensure that clean, fresh, conditioned air is delivered to the occupied space.

Cooling coils prevent the build-up of humidity in the room, even during part-load conditions. Unit sizes of 10 tons and above feature dual-circuit face-split coils.

1 inch (25.4 mm) WASHABLE air filters remove dust and airborne particles from the occupied space.

Standard double skin units provide an excellent resistance from the air-borne particles off the insulation thus maintaining an excellent indoor air quality (IAQ).

Pitched drain pan can be adjusted for a right- or left-hand connection to provide positive drainage and prevent standing condensate.

Accessory economizer can provide ventilation air to improve indoor air quality. When used with CO₂ sensors, the economizer admits fresh outdoor air to replace stale, recirculated indoor air.

Economy

The 40RM Series packaged air handlers have low initial costs, and they continue to save money by providing reduced installation expense and energy-efficient performance.

Quick installation is ensured by the multiposition design. Units can be installed in either the horizontal or vertical (upflow) configuration without modifications. All units have drain-pan connections on both sides, and pans can be pitched for right- or left-hand operation with a simple adjustment. Fan motors and contactors are prewired and TXVs are factory-installed on 40RM models.

High efficiency, precision-balanced fans minimize air turbulence, surging and unbalanced operation, thereby cutting operating expenses.

Economizer accessory precisely controls the blend of outdoor air and room air to achieve comfort levels. When the outside air enthalpy is suitable, outside air dampers can fully open to provide "free" cooling.

Rugged dependability

Polyester powder painted (zinc coated) panels provide excellent resistance to corrosion and also protect the colour in the areas where ultra-violet (UV) radiation factor is high.

Mechanically bonded coil fins provide improved heat transfer.

Galvanized steel fan housings are securely mounted to a die-formed galvanized steel deck.

Rugged pillow-block bearings (014-034 sizes) are securely fastened to the solid steel fan shaft with split collets and clamp locking devices.

Smaller unit size shave spider-type bearings.

Coil flexibility

Model 40RM (direct-expansion coils) and 40RMS (chilled water coils) have galvanized steel casings; inlet and outlet connections are external & on the same end.

Chilled water coils have 1/2 in. (12.7 mm) diameter copper tubes mechanically bonded to aluminum sine-wave fins. All coils have non-ferrous headers.

Direct expansion (DX) coils are designed for use with Refrigerant 22 and have copper tubes mechanically bonded to aluminum sine-wave fins. Direct-expansion coils include matched, factory-installed thermostatic expansion valves (TXVs) with matching distributor nozzles.

Easier installation and service:

The multi-position design and component layout help you to get the unit installed and running quickly. The DX coils have factory-installed TXVs with matching distributor nozzles. Units can be converted from horizontal to vertical operation by simply repositioning the unit. Drain pan connections are duplicated on both sides of the unit. The filters, motor, drive, TXVs, and coil connections are easily accessed by removing a single side panels.

Please contact your local Carrier sales office for the weights of single skin units.

Options and accessories

Factory-installed options

Alternate fan motors and drives are available to provide the widest possible range of performance.

Field-installed accessories

Two-row hot water coils have copper tubes mechanically bonded to aluminum plate fins and non-ferrous headers.

One-row steam coil has copper tubes and aluminum fins. The Inner Distributing Tube (IDT) design provides uniform temperatures across the coil face. The steam coil has a broad operating pressure range; up to 175 psig (1207 kPag) at 400 F (204.4 C) and up to 300 psig (2069 kPag) at 300 F (148.9 C). The IDT steam coils are especially suited to applications where sub-freezing air enters the unit.

Electric resistance heat coils have an open-wire design and are mounted in a rigid frame. Safety cutouts for high temperature conditions are standard. Terminal block for single-point power connection is included.

Economizer (enthalpy controlled) provides ventilation air and "free" cooling if outside ambient temperature and humidity are suitable. Can also be used with CO₂ sensors to help meet indoor air quality requirements.

Discharge plenum directs the air discharge directly into the occupied space; integral horizontal and vertical louvers enable redirection of airflow. Accessory is available unpainted or painted. Field assembly required.

Standard units available from the factory are in Double skin.

Return-air grille provides a protective barrier over the return-air opening and gives a finished appearance to units installed in the occupied space. Accessory is available unpainted or painted.

Subbase provides a stable, raised platform and room for condensate drain trap connection for vertical floor-mounted units. Accessory is available unpainted or painted.

Over head suspension package includes necessary brackets to support units in horizontal ceiling installations.

CO₂ sensors can be used in conjunction with the economizer accessory to help meet indoor air quality requirements. The sensor signals the economizer to open when the CO₂ level in the space exceeds the set point. A Carrier Comfort System programmable thermostat can be used to override the sensor if the outside air temperature is too high or too low.

Carrier's line of thermostats provide both programmable and non-programmable capability with the new Debonair line of commercial programmable thermostats, the TEMP System controls offer communication capability with staged heating and cooling, the Commercial Electronic thermostats provide 7-day programmable capability for economical applications, while the Non-Programmable thermostats offer a multitude of staged heating and cooling subbase options.

Condensate drain trap includes an overflow shutoff switch that can be wired to turn off the unit if the trap becomes plugged. Kit also includes a wire harness that can be connected to an alarm if desired. The transparent trap is designed for easy service and maintenance.

Selection procedure (with example) — English (60 Hz)

Cooling (DX)

- I Determine the cooling load and temperature and quantity of air entering the evaporator.

Given:

Total Capacity 200,000 Btuh

Sensible Heat Capacity..... 130,000 Btuh

Air Temperature Entering Indoor

Coil 80 F db, 67 F wb

Air Quantity Entering Indoor Coil 6000 cfm

Ductwork Static Pressure Loss 0.8 in. wg

Power Supply 230-3-60

- II Determine unit selection and coil refrigerant temperature.

Enter the Cooling Capacities table at 6000 cfm. Select a 40RM016 unit which has a total capacity of 207,000 and 174,000 Btuh at 40 and 45 F coil refrigerant temperature, respectively. By interpolation, coil refrigerant temperature of 41.1 F is needed to give a total capacity of 200,000 Btuh. Sensible capacity is approximately 149,000 Btuh. Cooling load is satisfied.

Heating (Hot Water Coil)

- I Determine heating load and temperature of air entering the indoor coil.

Given:

Load..... 425,000 Btuh

Entering-Air Temperature 70 F

Coils..... 2-Row Hot Water

Coil Entering-Water Temperature 200 F

Water Temperature Drop 20 F

- II Find the heating capacity.

Enter Hydronic Heating Capacities table for the 40RM016 unit at 6000 cfm. A 2-row hot water coil delivers 471,000 Btuh (based on 60 F entering air temperature and 20 F water temperature drop). Since existing entering air temperature is 70 F, enter the Heating Correction Factors table for hot water coils at 200 F entering water temperature, 20 F water temperature drop and 70 F entering air. Read a constant of 0.93.

$$471,000 \times 0.93 = 438,000$$

The 438,000 Btuh rating satisfies the heating load.

Fan

- I Determine fan speed and brake horsepower:

From the Accessory Pressure Drop table, read a loss of 0.23 in. wg for a hot water coil at 6000 cfm.

$$\begin{aligned}\text{External static pressure} &= 0.80 + 0.23 \\ &= 1.03 \text{ in. wg}\end{aligned}$$

Enter 40RM016 Fan Performance table at 6000 cfm and 1.03 in. wg. Interpolate and determine fan speed of 866 rpm and 2.7 bhp.

- II Determine motor and drive.

Enter the fan motor data tables on page 52, and find that the 230 v standard motor for a 40RM016 unit is rated at 3.7 Hp. Since the bhp required is 2.7, a standard motor satisfies the requirement and should be used.

Next, find the type of drive that satisfies the 866 rpm requirement in the Drive Data tables on pages 54-59. For a 40RM016 unit, the Medium-Static Drive table on page 54 shows an rpm range of 742 to 943. Since the rpm required is 866, the medium-static drive satisfies the requirement and should be used. Select the standard motor and medium-static drive combination (option code HC or FD).

To select an outdoor unit for this 40RM016 indoor section, refer to the Combination Rating sheets for Carrier condensing units in the condensing unit Product Data Digest, or consult the Carrier Electronic Catalog.

Cooling (Chilled Water)

NOTE: Chilled water coils (40RMS) can be selected by using Carrier's Electronic Catalog software program.

Selection procedure (with example) — SI (50 Hz)

Cooling (DX)

- I Determine the cooling load and temperature and quantity of air entering the evaporator.

Given:

Total Capacity 37 kW
Sensible Heat Capacity 29 kW
Air Temp Entering
Indoor Coil 26.7 C db, 19 C wb
Air Quantity Entering Indoor Coil 1900 L/s
Ductwork Static Pressure Loss 200 Pa

- II Determine unit selection and coil refrigerant temperature.

Enter the Cooling Capacities table at 1900 L/s. Select a 40RM012 unit which has a total capacity of 37.35 kW at 6 C coil refrigerant temperature. Sensible capacity is 29.61 kW. Cooling load is satisfied.

Heating (Hot Water Coil)

- I Determine heating load and temperature of air entering the indoor coil.

Given:

Load 85 kW
Entering-Air Temperature 15.6 C
Coils 2-Row Hot Water
Coil Entering-Water Temperature 93.3 C
Water Temperature Drop 11.1 C

- II Find the heating capacity.

Enter Hydronic Heating Capacities table for the 40RM012 unit at 1900 L/s. A 2-row hot water coil delivers 90 kW (based on 15.6 C entering air temperature and 11.1 C water temperature drop).

The 90 kW rating satisfies the heating load.

Fan

- I Determine fan speed and brake horsepower.

From the Accessory Pressure Drop table, read a loss of 93 Pa for a hot water coil at 1900 L/s.

$$\begin{aligned}\text{External static pressure} &= 200 + 93 \\ &= 293 \text{ Pa}\end{aligned}$$

Enter 40RM012 Fan Performance table at 1900 L/s and 293 Pa. Interpolate and determine fan speed of 15.79 r/s and 1.41 kW.

- II Determine motor and drive.

Enter the Fan Motor Data tables on page 52, and find that the standard motor for a 40RM012 unit is rated at 2.16 kW. Since the kW required is 1.41, a standard motor satisfies the requirement and should be used.

Next, find the type of drive that satisfies the 15.79 r/s requirement in the Drive Data tables on page 54-59. For a 40RM012 unit, the Medium-Static Drive table on page 59 shows an r/s range of 13.5 to 17.4. Since the r/s required is 15.79, the medium-static drive satisfies the requirement and should be used. Select the standard motor and medium-static drive combination (option code HC or FD).

To select an outdoor unit for this 40RM012 indoor section, refer to the Combination Rating sheets for Carrier condensing units in the condensing unit Product Data Digest, or consult the latest Carrier Electronic Catalog.

Cooling (Chilled Water)

NOTE: Select chilled water coils (40RMS) by using Carrier's Electronic Catalog software program.

LEGEND

BF — Bypass Factor
db — Dry-Bulb Temp (F)
Ewb — Entering Wet-Bulb Temp (F)
lwb — Leaving Wet-Bulb Temp (F)
SHC — Sensible Heat Capacity (1000 Btuh)
TC — Total Capacity (1000 Btuh)

NOTES:

1. Direct interpolation is permissible. Do not extrapolate.
2. Evaporator fan heat not deducted from ratings.
3. Ratings based on approximately 15 F superheat leaving coil.
4. Dashes indicate coil loading limits are exceeded.
5. Formulas:

$$\text{Leaving db} = \text{entering db} - \frac{\text{sensible heat capacity (Btuh)}}{1.1 \times \text{cfm}}$$

$$\text{Leaving wb} = \text{wet-bulb temperature corresponding to enthalpy of air leaving coil (h}_{\text{lwb}})$$

$$h_{\text{lwb}} = h_{\text{ewb}} - \frac{\text{total capacity (Btuh)}}{4.5 \times \text{cfm}}$$

where h_{ewb} = enthalpy of air entering coil

6. SHC is based on 80 F db temperature of air entering evaporator coil. Below 80 F db, subtract (corr factor x cfm) from SHC.

Above 80 F db, add (corr factor x cfm) to SHC. See italic type below.

BYPASS FACTOR	ENTERING AIR DRY-BULB TEMP (F)					
	79	78	77	76	75	Under 75
	81	82	83	84	85	Over 85
Correction Factor						
0.02	1.08	2.16	3.23	4.31	5.39	use formula shown below
0.05	1.05	2.09	3.14	4.18	5.23	
0.10	0.99	1.98	2.97	3.96	4.95

LEGEND

BF — Bypass Factor
Edb — Entering Dry Bulb
Ewb — Entering Wet Bulb
Ldb — Leaving Dry Bulb
Lwb — Leaving Wet Bulb
SHC — Sensible Heating Capacity (kW)
TC — Total Capacity (kW)

NOTES:

1. Ratings based on approximately 8.3 C superheat leaving coil.
2. Direct interpolation is permissible. Do not extrapolate.
3. The SHC is based on 26.7 C db temperature of air entering the unit. At any other temperature, correct the SHC reading from the table of cooling capacities as follows:
 Correction factor = $1.23 \times 10^{-3} \times (1 - BF) \times (db - 26.7)$
 Above 26.7 C, add SHC correction to SHC. Below 26.7 C, subtract SHC correction from SHC.

4. Gross capacities shown do not include a deduction for evaporator-fan motor heat.
5. Formulas (cooling):

$$t_{ldb} = t_{edb} - \frac{\text{sensible heat capacity (kW)}}{1.23 \times 10^{-3} \times (\text{L/s})}$$

t_{lwb} = wet-bulb temperature corresponding to enthalpy of air leaving coil (h_{lwb})

$$h_{lwb} = h_{ewb} - \frac{\text{total capacity (kW)}}{1.20 \times 10^{-3} \times (\text{L/s})}$$

where h_{ewb} = enthalpy of air entering coil (kJ/kg)

LEGEND

Cap. — Capacity (Btuh in thousands)
Ldb — Leaving-Air Dry-Bulb Temp (F)
PD — Pressure Drop (ft water)

*Based on 5 psig steam, 60 F entering-air temperature. All steam coils are non-freeze type.

†Based on 200 F entering water, 20 F water temperature drop, 60 F entering-air temperature.

NOTES:

- Maximum operating limits for heating coils: 175 psig at 400 F.
- Leaving db = ent db (F) + $\frac{\text{Capacity (Btuh)}}{1.1 \times \text{cfm}}$
- See Heating Correction Factors table.

40RM/RMS

See Legend and Notes on page 32.

Performance data (cont)

LEGEND

Bhp - Brake Horsepower Input to Fan
ESP - External Static Pressure

Bold indicates field supplied drive is required.

Plain type indicates standard motor and standard drive.

Underline indicates a different motor and drive combination other than the standard motor and standard drive combination is required. Refer to fan motor and drive tables, pages 52-59, to complete selection.

NOTES:

- 1. Maximum allowable fan speed is 1100 rpm for unit sizes 028 and 034; 1200 rpm for all other sizes.
- 2. Fan performance is based on deductions for wet coil, clean 1-in. filters, and unit casing. See table at right for factory-supplied filter pressure drop.
- 3. For 60 Hz units, the medium-static drive and standard motor combination is not available for 028 size. For 50 Hz units, the medium-static drive and standard motor combination is not available for 016-028 sizes. Use alternate motor if medium-static drive is required for these sizes.

See Legend and Notes on page 37.

LEGEND

ESP - External Static Pressure

Bold indicates field-supplied drive is required.

Plain type indicates standard motor and standard drive.

Underline indicates a different motor and drive combination other than the standard motor and standard drive combination is required. Refer to fan motor and drive tables, pages 52-69, to complete the selection.

NOTES:

1. Maximum allowable fan speed is 18.3 r/s for unit sizes 028 and 034; 20 r/s for all other sizes.
2. Fan performance is based on deductions for wet coil, clean 25.4 mm filters, and unit casing. See table below for factory-supplied filter pressure drop.
3. For 60 Hz units, the medium-static drive and standard motor combination is not available for 028 size. For 50 Hz units, the medium-static drive and standard motor combination is not available for 016-028 sizes. Use alternate motor if medium-static drive is required for these sizes.

LEGEND

FLA — Full Load Amps

MOCP — Maximum Overcurrent Protection

*Motors are designed for satisfactory operation within 10% of nominal voltages shown. Voltages should not exceed the limits shown in the Voltage Limits column.

NOTES:

1. Minimum circuit amps (MCA) and MOCP values are calculated in accordance with NEC (National Electrical Code) (U.S.A. standard), Article 440.
2. Motor FLA values are established in accordance with UL (Underwriters' Laboratories) Standard 1995 (U.S.A. standard).
3. **Unbalanced 3-Phase Supply Voltage**

Never operate a motor where a phase imbalance in supply voltage is greater than 2%. Use the following formula to determine the percentage of voltage imbalance.

% Voltage Imbalance

$$= 100 \times \frac{\text{max voltage deviation from average voltage}}{\text{average voltage}}$$

EXAMPLE: Supply voltage is 400-3-50.

$$\begin{aligned} \text{AB} &= 393 \text{ v} \\ \text{BC} &= 403 \text{ v} \\ \text{AC} &= 396 \text{ v} \\ \text{Average Voltage} &= \frac{393 + 403 + 396}{3} \\ &= \frac{1192}{3} \\ &= 397 \end{aligned}$$

Determine maximum deviation from average voltage.

$$(\text{AB}) 397 - 393 = 4 \text{ v}$$

$$(\text{BC}) 403 - 397 = 6 \text{ v}$$

$$(\text{AC}) 397 - 396 = 1 \text{ v}$$

Maximum deviation is 6 v.

Determine percent voltage imbalance.

$$\begin{aligned} \% \text{ Voltage Imbalance} &= 100 \times \frac{6}{397} \\ &= 1.5\% \end{aligned}$$

This amount of phase imbalance is satisfactory because it is below the maximum allowable 2%.

IMPORTANT: If the supply voltage phase imbalance is more than 2%, contact your local electric utility company immediately.

40RM/RMS

LEGEND

- FLA** — Full Load Amps
Hp — Horsepower
MCA — Minimum Circuit Amps
MOCP — Maximum Overcurrent Protection (Amps)

*Values shown are for single-point connection of electric heat accessory and air handler.

†Single-phase motors. All other motors are 3-phase.

NOTES:

- Electrical resistance heaters are rated at 240 v, 480 v, or 575 v. To determine heater capacity (kW) at unit nameplate multiply the 240-v, 480-v, or 575-v capacity (kW) by the factor shown in the table below for the unit voltage.

HEATER RATING VOLTAGE	ACTUAL HEATER VOLTAGE										
	200	208	230	240	400	440	460	480	550	575	600
240	0.694	0.751	0.918	1	—	—	—	—	—	—	—
480	—	—	—	—	0.694	0.84	0.918	1	—	—	—
575	—	—	—	—	—	—	—	—	0.915	1	1.089

- The following equation converts kW of heat energy to Btuh:

$$\text{kW} \times 3,412 = \text{Btuh}$$

- Heater contactor coils are 24 v and require 8 va holding current.

- Electric heaters are tested and ETL approved at maximum total external static pressure of 1.9 in. wg.

- MCA and MOCP values apply to both standard and alternate factory-supplied motors.

MCA — Minimum Circuit Amps
MOCP — Maximum Overcurrent Protection (Amps)

*Values shown are for single-point connection of electric heat accessory and air handler.

†Single-phase motors. All other motors are 3-phase.

NOTES:

- Electrical resistance heaters are rated at 240 v, 480 v, or 575 v. To determine heater capacity (kW) at unit nameplate multiply the 240-v, 480-v, or 575-v capacity (kW) by the factor shown in the table below for the unit voltage.

HEATER RATING VOLTAGE	ACTUAL HEATER VOLTAGE										
	200	208	230	240	400	440	460	480	550	575	600
240	0.694	0.751	0.918	1	—	—	—	—	—	—	—
480	—	—	—	—	0.694	0.84	0.918	1	—	—	—
575	—	—	—	—	—	—	—	—	0.915	1	1.089

- The following equation converts kW of heat energy to Btuh:

$$\text{kW} \times 3,412 = \text{Btuh}$$
- Heater contactor coils are 24 v and require 8 va holding current.
- Electric heaters are tested and ETL approved at maximum total external static pressure of 1.9 in. wg.
- MCA and MOCP values apply to both standard and alternate factory-supplied motors.

Application data

Operating limits

Maximum fan speed- 40RM007-024,
40RMS008-024 1200 rpm (20 r/s)
Maximum fan speed- 40RM and
40RMS028,034 1100 rpm (18.3 r/s)

General

Select equipment to match or to be slightly less than peak load. This provides better humidity control, less unit cycling, and less part-load operation. Equipment should be selected to perform at no less than 300 cfm/ton (40 L/s per kW).

The air handler fan must always be operating when the condensing unit is operating.

Ductwork should be sized according to unit size, not building load. For larger units with two fans, a split duct transition is recommended at the fan outlets, but a plenum can be used with slight reduction in external static pressure capability.

For variable air volume (VAV) systems with supply-to-return air recycling, use the equipment room as a return air plenum.

*It is possible to adjust drive so that fan speed exceeds maximum allowable. DO NOT exceed 20 r/s.

Guide specifications

Commercial Packaged Air-Handling Unit

HVAC Guide Specifications

Size Range: 2,400 to 12,000 CFM (1150 to 5650 L/s),
Nominal Airflow 6 to 30 Tons (21 to 105 kW), Nominal Cooling

Carrier Model Numbers: 40RM (Direct-Expansion Coil)
40RMS (Chilled Water Coil)

Part 1 - GENERAL

1.01 SYSTEM DESCRIPTION

- A. Indoor, packaged air-handling unit for use in commercial split systems. Unit shall have a multiposition design and shall be capable of horizontal or vertical installation on a floor or in a ceiling, with or without ductwork. (Only vertical units are to be applied without ductwork.)
- B. Unit with direct-expansion coil shall be used in a refrigerant circuit with a matching air-cooled condensing unit. Unit with chilled water coil shall be used in a chilled water circuit.

1.02 QUALITY ASSURANCE

- A. Coils shall be designed & tested in accordance with ASHRAE 15 Safety Code for Mechanical Refrigeration (U.S.A.), latest edition.
- B. Unit shall be constructed in accordance with ETL (U.S.A.) and ETL, Canada, standards and shall carry the ETL and ETL, Canada, labels.
- C. Unit insulation and adhesive shall comply with NFPA-90A (U.S.A.) requirements for flame spread and smoke generation.
- D. Unit shall be manufactured in a facility registered to the ISO 9002 manufacturing quality standard.
- E. Direct-expansion and chilled water coils shall be burst and leak tested at 435 psi (2999 kPa).

1.03 DELIVERY AND STORAGE

Units shall be stored and handled per manufacturer's recommendations.

Part 2 - Products

2.01 EQUIPMENT

Indoor mounted, draw-thru, packaged air-handling unit that can be used in a suspended horizontal configuration or a vertical configuration. Unit shall consist of forward-curved belt-driven centrifugal fan(s), motor & drive assembly, prewired fan motor contactor, factory-installed refrigerant metering devices (direct-expansion coil units), cooling coil, 1-in. (25.4-mm) washable air filters, and condensate drain pans for vertical or horizontal configurations.

A. Base Unit (Painted):

1. Cabinet shall be constructed of zinc coated steel and polyester powder painted to protect them from corrosion in the harsh Middle Eastern climate and also to increase the colour life in high ultra-violet (UV) radiation regions.
2. Cabinet panels shall be fully insulated with 1/2 in. (12.7-mm) fire-retardant material.
3. Unit shall contain PVC condensate drain pans for both vertical and horizontal applications. Drain pans shall have connections on right and left sides of unit to facilitate field connection. Drain pans shall have the ability to be sloped toward the right or left side of the unit to prevent standing water from accumulating in pans.
4. Unit shall have factory-supplied 1-in. (25.4 mm) washable-type filters installed upstream from the cooling coil. Filter access shall be from the front of the unit.

B. Coils:

Coils shall consist of 3 rows (40RM, 40RMS), of copper tubes with sine-wave aluminum fins bonded to the tubes by mechanical expansion. Suction and liquid line connections or supply and discharge connections shall be made on the same side of the coil.

1. Direct-expansion coils shall feature factory-installed thermostatic expansion valves (TXVs) for refrigerant control. The TXVs shall be capable of external adjustment. Direct-expansion heat pump coils shall have a factory-installed bypass line and check valve assembly around the TXVs to allow liquid flow from the coil to the outdoor unit during the heating mode. Coil tubing shall be internally rifled to maximize heat transfer.
2. Chilled water coils shall be rated for an operating pressure of not less than 300 psig (2069 kPag).

C. Operating Characteristics:

Unit shall be capable of providing _____ cfm (L/s) airflow at an external static pressure of _____ in. wg (kPag).

D. Motor:

Fan motor of the size and electrical characteristics specified on the equipment schedule shall be factory supplied and installed.

Motors rated at 1.3 through 3.7 hp (0.97 through 2.76 kW) shall have internal thermal overload protection. Motors rated at 5, 7 1/2, and 10 hp (3.73, 5.60, and 7.46 kW) shall be protected by a circuit breaker.

E. Factory-Installed Options:

1. Alternate Motor and Drive:

An alternate motor and/or medium- or high-static drive shall be available to meet the airflow and external static pressure requirements specified on the equipment schedule.

F. Field-Installed Accessories (ordered from NAO):

1. Hot Water Coil:

Coil shall be 2-row, U-bend coil with copper tubes and aluminum plate fins bonded to the tubes by mechanical expansion. Coil shall be mounted in a galvanized steel housing that shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 150 psig (1034 kPag).

2. Steam Distributing Coil:

Coil shall consist of one row of copper tubes with aluminum plate fins, and shall have inner steam distributing tubes. Coil shall be mounted in a galvanized steel housing and shall be fastened to the unit's fan deck for blow-thru heating operation. Coil shall have maximum working pressure of 175 psig at 400 F (1207 kPag at 204.4 C).

3. Electric Heaters:

Heaters for nominal 240, 480, or 575-volt, 3-phase, 60 Hz; and 240, 400-volt, 3 phase, 50 Hz power supply shall be factory-supplied for field installation as shown on the equipment drawings. Electric heat assembly shall be ETL (U.S.A.) and ETL, Canada, agency approved, and shall have single-point power wiring. Heater assembly shall include contactors with 24-V coils, power wiring, 24-v control wiring terminal blocks, and a hinged access panel. Electric heaters shall not be used with air discharge plenum.

4. Air Discharge Plenum:

Plenum shall be factory supplied to provide free-blow air distribution for vertical floor-mounted units. A grille with moveable vanes for horizontal or vertical airflow adjustment shall be included. Plenum shall be field-assembled and field-installed on the unit's fan deck for blow-thru air distribution. Plenum shall not be used with electric heaters.

5. Return Air Grille:

Grille shall be factory supplied for field installation on the unit's return air opening.

6. Unit Subbase:

Subbase assembly shall be factory supplied for field installation. Subbase shall elevate floor-mounted vertical units to provide access for correct condensate drain connection.

7. Economizer:

Economizer for ventilation or "free" cooling shall be factory provided for field installation on either return air opening of air handler. For free cooling applications, economizer shall be compatible with separate thermostat; economizer dampers shall open when outdoor air enthalpy is suitable for free cooling. Economizers shall be compatible with separate CO₂ sensor accessory; economizer dampers shall open when indoor CO₂ level rises above predetermined setpoint. Economizers shall include enthalpy control and damper actuator.

8. Thermostat Controls:

- Debonair programmable multi-stage thermostat with 7-day clock, holiday scheduling, large Thermoglow^Y display, remote sensor capability, and Title 24 compliance.
- TEMP System programmable communicating multi-stage thermostat with fan switch, time clock, LCD display, E/F/EC capability and CCN compatibility.
- Commercial Electronic Thermostat with 7-day time clock, auto-changeover, multi-stage capability, and large LCD temperature display.
- Non-programmable thermostat with fan switch subbase.

9. Overhead Suspension Package:

Package shall include necessary brackets to support units in a horizontal ceiling installation.

10. CO₂ Sensor:

Sensor shall provide the ability to signal the economizer to open when the space CO₂ level exceeds the predetermined set point. Sensor shall have the capability of being connected to Comfort System relay pack or to economizer using field-supplied and -installed Honeywell dc adapter no. Q769C1004.

11. Condensate Drain Trap:

Trap shall have transparent, serviceable design for easy cleaning. Kit shall include overflow shut-off switch and wiring harness for connection to an alarm if desired.
